

EfficienZ®

Fermentation Product

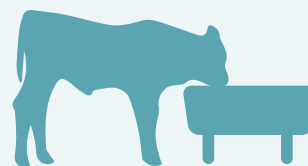

Optimizing Feed Intake and Daily Gain

Optimize fermentation of feedstuffs and growth performance with cost-effective Fortiva™ EfficienZ® Fermentation Product.

Increasing pounds to sell is always valuable, no matter the market situation. Research demonstrates that Fortiva EfficienZ Fermentation Product supports rumen function, potentially resulting in:

- ✓ **Optimized volatile fatty acid production**
Increasing the propionate:acetate ratio supports fermentation efficiency and the production and availability of energy.
- ✓ **Greater daily dry matter intake (DMI)**
Supplying more energy and nutrients to cattle.
- ✓ **Increased average daily gain (ADG)**
Resulting in heavier selling weights.
- ✓ **Improved carcass quality**
Leading to an increased percentage of cattle grading USDA Prime or Choice.

Seamlessly incorporate EfficienZ Fermentation Product into your current feeding program.

- Maximize the effectiveness of available feedstuffs with a **strong return on investment potential**.
- Conveniently utilize with other commercially available feed additives to **optimize fermentation efficiency and energy production**.
- Flexibility to capture returns from added pounds when selling live cattle or from improved carcass grade when selling on a value program.
